

RemoteStream

Expanding Possibilities and Extending Boundaries

DOWNSTREAM
RELIABLE EXPERTS | RELIABLE RESULTS

Downstream developed RemoteStream to assist with device and data preservation, analysis and reporting, allowing us to overcome geographic challenges and time constraints, while acquiring data in a defensible, forensically-sound way. The technology allows for the defensible capture of a variety of data sources, including the ability for custodians to input their passwords directly into the device at collection time for sensitive data sources (such as personal email accounts), where changing or sharing credential is not desired.

- ✓ A new class in mobile device & remote data collections to simplify data acquisition
- ✓ Compact, pocket-sized, powerful multi-source acquisition device
- ✓ Scalable for any data storage requirements
- ✓ Zero configuration – connect device, power on and close the lid
- ✓ End-to-end security at rest, and in transit

Offsite Staff - Onsite Presence 24/7/365

- ✓ Unrestricted availability with flexible scheduling and professional customer service
- ✓ Remote assistance every step of the way with secure communication
- ✓ Methodologies and workflows designed for minimal impact to business
- ✓ Immediate post-collection filtering of sensitive or personal information

GPS In-Transit Security Anytime, Anywhere

- ✓ Add defensibility layer to your shipping protocols
- ✓ Ship original evidence and confidential information with real-time geo-location updates during transit
- ✓ Path history available to view precise delivery routes
- ✓ Worldwide tracking
